

## 2017 Annual Enrollment

### Preventive Services

#### 2017 Assurant Health Plan Preventive Services

Early detection of disease can often be the difference between life and death; between being well and being disabled. The Assurant Health Plan encourages you and your family to get the preventive services that are appropriate for your age, gender, and other risk factors such as family medical history by covering the following ***routine*** preventive services. If you use an in-network provider, these services will be reimbursed at 100 percent, and the deductible will not apply. If you use a non-network provider, these services will be subject to the deductible and coinsurance.

If as a result of a routine preventive service, disease is suspected or identified, any further exams and tests for the disease will be considered diagnostic and will be subject to deductible and coinsurance.

#### Covered Preventive Services for Adults

##### Screenings

Abdominal aortic aneurysm	Type 2 diabetes (for adult with high blood pressure) (Screening covered as part of routine exam with primary care physician)
